DETAILED ACTION

Claims 1-6 are pending. Drawings, 1 sheet were filed with the application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dessau et al and Lindner et al.

Dessau et al teach a process for preparing propylene oxide using hydrogen, oxygen and an epoxidation catalyst. The catalyst is a noble metal on a titanium zeolite. See column 1 lines 58-61; column 2 lines 13-19 which describe TS-1, and lines 39-46 which describe noble metals. The reaction may be carried out in the liquid phase. See column 5 line 64 thru column 6 line 4. The sole difference between Dessau et al and the claimed invention is the particular solvent, i.e. known solvents versus solvents with boiling point of at least 130C.

Lindner et al teach an epoxidation process where the solvent has a high boiling point. Lindner et al further points out that solvents used in the liquid phase for preparing olefin oxide are generally known in the art and include solvents that have a boiling point of at least 130C. See column 3 line 51 thru column 4 line 11.

Lindner et al teach an equivalency between solvents already known to be used in epoxidation process and solvents having a boiling point of at least 130C used in epoxidation

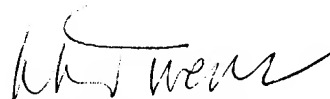

process. Given this equivalency, one of ordinary skill in the art would be motivated to replace the solvent of Dessau et al with the solvent of Lindner et al to arrive at the claimed process.
